MEMUNA JAVED

memuna.javedd@gmail.com ◇ github.com/memuna-javedd

OBJECTIVE

Undergraduate software engineering student seeking an ML/AI internship to apply my mathematics and programming foundations to real-world projects, gain practical engineering experience, and grow into a Machine Learning Engineer.

EDUCATION

NUST (National University of Sciences and Technology) — Fall 2025 – Present (Expected 2029)
BS Software Engineering

- CGPA: 3.83/4.0 (Semester 1 GPA: 3.75/4.00 ; Semester 2 GPA: 3.92/4.00)
- 55% merit-based scholarship covering the full degree

APSACS (Army Public Schools and Colleges System) — 2023 – 2025
Intermediate (FSc), Pre-Engineering: 91.45% (1006/1100)

- 100% merit-based tuition scholarship (Grades 11–12); competitive Fauji Foundation merit scholarship (Grades 11–12)

APSACS (Army Public Schools and Colleges System) — 2021 – 2023
Matriculation: 95% (1045/1100)

- 100% merit-based tuition scholarship (Grade 10); competitive Fauji Foundation merit scholarship (Grade 9)

SKILLS

Programming:	Python, C++, Java, C, SQL, HTML
Data Science:	NumPy, Pandas, Matplotlib
Machine Learning:	Scikit-learn, TensorFlow
Tools:	Git, GitHub, VS Code, Jupyter Notebook, Google Colab

EXPERIENCE

Recruiter — June 2026 – Present
24x7 Transport (UK), through Supra BPO

- Selected through Supra BPO interviews and two client-side assessments by 24x7 Transport UK management: an English communication assessment and a live interviewing role-play
- After 2 weeks of paid training, conducted 462+ completed live interviews in English (July–October 2026, about 599 working hours) with applicants from different countries, cultures and backgrounds, adapting my communication to each applicant's English level
- Replied to and resolved 300+ applicant emails; answered applicants' questions and handled customer-support queries

Volunteer Intern, Finance Department — 22 Aug – 4 Sep 2026
Pak Aid Welfare Trust (nonprofit welfare organization), Islamabad

- Prepared and signed 15+ Bank Payment Vouchers (BPVs) and APVs, and made 15+ financial reports in MS Word, taking on part of a permanent employee's workload (about 46 hours over 2 weeks)
- Maintained records of donations received and how they were spent across the Sadqah, Zakat, Palestinian and general funds in MS Excel, supporting transparency and accountability
- Learned and worked on the organization's finance software, Sidat; handled confidential financial information throughout

PROJECTS

Note: These are first attempts, written to implement the core functions (cost, gradients, gradient descent) myself rather than rely on built-in ones. I'm still learning, and as I become able to diagnose what's wrong and how to improve each model, I'll update them side by side. These are not final versions.

Univariate Linear Regression from Scratch. Built linear regression with NumPy only (cost function, partial derivatives, gradient descent) on a 30-sample salary vs. years-of-experience dataset. Trained for 10,000 iterations (learning rate 0.01), fitted the line ($w = 9449.96$, $b = 24848.20$), and plotted it against the data. (Python, NumPy, Pandas, Matplotlib)

Breast Cancer Diagnosis (Logistic Regression from Scratch). Implemented sigmoid, log-loss cost and gradient descent from scratch to classify tumors as malignant or benign using 30 features across 569 samples. Cleaned the data, encoded labels, visualized all features against diagnosis, and standardized inputs with z-score normalization. (Python,

NumPy, Pandas, Matplotlib)

MNIST Handwritten Digit Classifier. Built a 3-layer neural network in TensorFlow/Keras (40-20-10 units, sigmoid) to classify 10 digits from 60,000 images of 784 pixels each, trained with the Adam optimizer and sparse categorical cross-entropy. (Python, TensorFlow, Keras)

YouTube Trending Video Views Predictor. Cleaned 40,949 records (removed 48 duplicates, handled 570 missing values, converted date fields) and engineered an 80/20 train-test split. Built multiple linear regression from scratch with gradient descent to predict views from likes, dislikes and comment count after standardizing features. (Python, NumPy, Pandas, Seaborn, Scikit-learn)

CERTIFICATIONS AND INDEPENDENT LEARNING

DeepLearning.AI / Stanford Online, Machine Learning Specialization: Supervised Machine Learning: Regression and Classification (completed; certificate: coursera.org/share/7937044acdc2d6773ecd365db9a58b67); Advanced Learning Algorithms (in progress)

Hands-On Machine Learning with Scikit-Learn, Keras & TensorFlow, 3rd Edition (self-study, in progress)

LEADERSHIP AND ACHIEVEMENTS

- 28 certificates, 5 shields and 1 trophy for academic and extracurricular achievements
- Class Representative for 10+ years, from Montessori through Intermediate
- Consistently ranked in the top 1–3% of students from Montessori through Intermediate, across different APS campuses
- Head Girl candidate (Grade 12) after multiple interviews with different authorities; received the 2nd-highest votes, two votes behind the selected candidate
- House Captain
